

What We Do

Marycare's singular mission is to *break the vicious cycle of poverty* in communities marginalized and isolated because of their ethnic and social economic status. The Nutritional Program is one of the programs we sponsor to carry out our mission.

Nutritional Program

- Marycare is funding a nutritional program to teach Nigerian women the health benefit of growing, preparing and eating the Moringa Plant. According to UNICEF, one in five Nigerian children die before their fifth birthday.
- Majority of the people are not only uneducated in basic healthcare and disease prevention but worse still, live on less than \$1 a day and cannot pay for travel to urban hospitals. With your support and generous donations, Marycare proposed a solution by introducing foods to cure malnutrition based on UN practice of feeding severely malnourished with vitamin enriched, energy, growth enhancing prepared food containing leaves of "miracle tree" Moringa and energy provided by peanuts; all locally grown and prepared with sweetener and flavoring.
- Moringa oleifera leaves contain all essential vitamins, minerals and amino acids.
